SEEDS

SPRING-1946

The Chas. C. Hart Seed Co.
WEBBSTERFIELD 9, CONNECTICUT

Dear Fellow Gardeners:

We are pleased to present our 1946 Seed Catalog which we trust you may find interesting and informative.

In our presentation we have endeavored to describe various varieties concisely and in a manner which may be helpful in your choice for your particular needs. We are this year combining our home garden and market gardener's catalogs and have designated our choice for your use which we hope may be of assistance in formulating your order.

We are all most thankful that the war is now over and that victory is ours. During the war Gardening has been a patriotic move. Gardening will now still be most helpful to us as a people in our country, and a great help to the devastated countries of the world. If we continue to grow more vegetables we will continue to release food sorely needed elsewhere and by growing our own we will assure ourselves of that quality procured only by freshness. It will still be a pleasure and a healthful hobby to millions of us who will grow more and better vegetables in the future.

We welcome your friendly letters and hope that we may have the privilege of serving you again this season.

Lawn grass furnished by Chas. C. Hart Seed Co., Fall of 1945

Hart's Lawn Grass Seeds

LAWN SEED is the greatest mystery in the world to most home owners who cannot make head or tail out of the complex formulas printed on Lawn Seed labels. They are not meant to be confusing but most people do not know which grasses are desirable or undesirable in a lawn. One pound of Lawn Seed is required for 150 square feet but heavier seeding is desirable.

In general, the finest grasses for permanent, velvety lawns are Kentucky Blue Grass, Chewings Fescue or any of the Bent family. WHITE CLOVER may be added if desired but the most attractive lawns are made without it. The higher the percentage of these grasses the better your lawn will be.

However, these are slow to establish themselves and other quick-growing grasses must be added to act as nurse grasses. These grow rapidly and furnish shade and cover until the more permanent seeds have established themselves. The two best are RED TOP and RYE GRASS but the finest lawns are made with mixtures containing not more than 30% of these.

For special purposes Poa Trivialis and Chewings Fescue are essential for shady locations or for poor and sandy soils while Canada Blue Grass is useful for terraces and steep banks.

After you have made certain that the desirable seeds are in your mixture check the percentage of inert matter. This is dead seed or seed hulls or chaff and it is material you pay for but do not use. It is completely waste and the smaller the percentage of waste the better your mixture. The weed content should be small, of course, but more weed seeds are present in your per soil square foot than are ever found in fifty pounds of decent Lawn Seed.

The State of Connecticut has set up standards for Lawn Seed and when these blends are used a fine lawn is assured. We are licensed to offer these blends which are: Gold Seal, certified to be of the highest quality; Blue Seal of high quality; and Red Seal, of good quality. We also offer a GOLD SEAL ALL-BENT FORMULA for putting or bowling greens, SHADY PLACE for deeply shaded areas, TERRACE SOD for steep embankments and a special formula for Poor or Sandy Soils.

We also present two blends where price is a larger consideration; ELM TREE and EVERGREEN. These are both excellent blends for competitive purposes and will prove satisfactory for the average lawn. They simply do not contain as large a percentage of the finer bladed, more desirable grasses nor is their purity quite as high as in the State Seal mixtures. We also list a complete variety of all separate turf grasses should you desire to grow these alone. We invite your questions and problems.

We solicit inquiries from builders and contractors who require special blends for unusual conditions or whose problem is the necessity for a quick green cover on rather poor soil. If you are building a new home, ask your contractor to specify HART'S SEEDS for your lawn—because a fine lawn always adds to the value of your property.
